

# Code Blocks

The theme includes styling for both inline and block code snippets. Here is an example of a Python code block:

```
def main():  
    """Prints a welcome message."""  
  
    if 4 ≥ 3: # With ligatures!  
        print("Welcome to my presentation!")  
  
if __name__ == "__main__":  
    main()
```
